

Carbon Monoxide Is The #1 Cause Of Poisonings In The U.S.

Is Your Family Protected?

Due to accuracy problems and lobbying from fire departments & utility companies "retail store" alarms conforming to the UL standard will not alarm unless Carbon Monoxide levels are at least 70 ppm. They do not warn of chronic or intermittent low-level exposure which can lead to health problems and at high levels can cause death. Listed below are the differences between a standard retail alarm and a high quality low-level monitor.

GOOD...

First Alert Carbon Monoxide Detector

- Will alert you to high levels of Carbon Monoxide of 70 ppm or more but has to be present for at least 1 to 3 hours
- Will prevent death from acute high levels of Carbon Monoxide
- Lower initial cost
- 1-5 year lifespan
- Test button tests the battery

BETTER...

Kidde Night Hawke Model KN-COPP-B-LS

- Digital display feature shows CO level. Updates every 15 seconds allowing you to see levels of change
- 7 year end of life warning which alerts user to replace CO alarm after 7 years of operation providing 40% longer than other retail alarms
- Battery operated to ensure coverage during a power outage
- Alarms at a level of 70 ppm

BEST...

NSI 3000 Low-Level Carbon Monoxide Monitor

- Professional Grade, ultra sensitive electro chemical sensor that detects levels as low as 5 ppm within 30 seconds
- 3 Levels of Detection— low, medium, high with visual & audible alerts and digital display
- Fail safe design that monitors the sensor, electronics and the battery
- Battery-operated and designed for wall mount or portable use
- 3 year limited warranty
- Continuous scan mode and digital memory with recall that lets you know the monitor is checking for Carbon Monoxide 24/7
- NSI 3000 Low-Level monitor—provides protection for all ages and groups. Infants, children & the elderly are more sensitive to Carbon Monoxide.
